The life of the basic air-freshener can be more than doubled using the technique. Essential oil components evaporate gradually, so that the air does not become oversaturated with fragrances. The wax substrate can be reused after reimpregnation with essential oils and the process does not require holders or containers to be manufactured for the pellets. Essential oils such as lavender, rose, geranium, mint, basil, dill, fennel, coriander, sage, jasmine, Artemisia and pine are added in quantities ranging from 10% to 25% to aromatic waxes. Pellets made from these mixts. are placed in warm water as required, so as to release aromatic vapours into the atmosphere.

USE/ADVANTAGE - An improved technique for removing unpleasant odours in the home or in public places. Bul.42/15.11.92
